**SUBJECT: FMD National measures in Croatia, temporary traffic arrangements**

Dear colleagues,

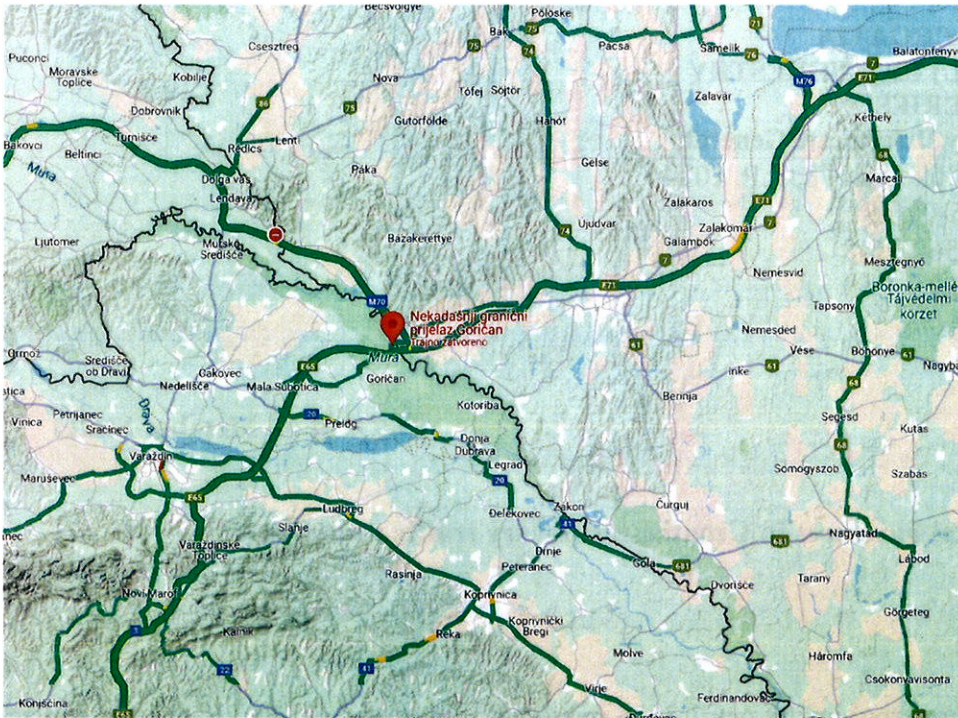

We would like to inform you that on 15 April 2025 new *Order on measures for the prevention and early detection of foot-and-mouth disease and pest of small ruminants in the Republic of Croatia*, introduced in order to reduce the risk of introduction of FMD will be in force.

According to requirements of the abovementioned Order, ban on movement of susceptible animals originating from Hungary and Slovakia to Croatia is still in force. Susceptible animals originating from other EU countries, transiting through Hungary and Slovakia and road vehicles transporting raw milk originating from Hungary or Slovakia are allowed to enter Republic of Croatia only through the following two previous border crossings:

**Control post, previous border crossing Duboševica (HR) - Udvar (HU)**

## Control post, previous border crossing Goričan (HR) - Letenye (HU)

All transports of live susceptible animals from transit and vehicles transporting raw milk will be checked and disinfected on those border crossings. Consignments of other products are not included in the national order with measures or traffic arrangements. Empty vehicles intended for transport of live animals or milk have to be disinfected prior entering Republic of Croatia, and drivers have to present attestation of disinfection upon request of an official personnel.

Kind regards

**DIRECTOR GENERAL**

**Tatjana Karačić, DVM, MSc**  
**Chief Veterinary Officer**
