COMMISSION REGULATION (EU) .../...

of XXX

**amending Annex XVII to Regulation (EC) No 1907/2006 of the European Parliament
and of the Council concerning the Registration, Evaluation, Authorisation and
Restriction of Chemicals (REACH) as regards lead in gunshot**

(Text with EEA relevance)

COMMISSION REGULATION (EU) .../...

of **XXX**

amending Annex XVII to Regulation (EC) No 1907/2006 of the European Parliament and of the Council concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH) as regards lead in gunshot

(Text with EEA relevance)

THE EUROPEAN COMMISSION,

Having regard to the Treaty on the Functioning of the European Union,

Having regard to Regulation (EC) No 1907/2006 of the European Parliament and of the Council of 18 December 2006 concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH), establishing a European Chemicals Agency, amending Directive 1999/45/EC and repealing Council Regulation (EEC) No 793/93 and Commission Regulation (EC) No 1488/94 as well as Council Directive 76/769/EEC and Commission Directives 91/155/EEC, 93/67/EEC, 93/105/EC and 2000/21/EC¹, and in particular Article 68(1) thereof,

Whereas:

- (1) Annex XVII to Regulation (EC) No 1907/2006 lays down restrictions on the manufacture, placing on the market and use of certain dangerous substances, mixtures and articles. Entry 63 of that Annex contains restrictions with respect to lead (CAS No 7439-92-1, EC No 231-100-4) and lead compounds ('lead'), including a restriction on lead in gunshot in or around wetlands that was introduced by Commission Regulation (EU) 2021/57².
- (2) Lead is classified under Regulation (EC) No 1272/2008³ as very toxic to aquatic life, and toxic for reproduction, due to its adverse effects on fertility and the development of the nervous system of the foetus and the child, leading to permanent damage and intelligence quotient (IQ) loss. No safe lead-concentration threshold has been identified under which lead has no ill effects on human health. Lead is also associated with an increased risk of cardiovascular, kidney and central-nervous-system diseases in adults. Moreover, exposure to lead can have a range of acute and chronic toxicological effects, including death, in animals, particularly in birds⁴.

² Commission Regulation (EU) 2021/57 of 25 January 2021 amending Annex XVII to Regulation (EC) No 1907/2006 of the European Parliament and of the Council concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH) as regards lead in gunshot in or around wetlands (OJ L 24, 26.1.2021, p. 19 ELI: <http://data.europa.eu/eli/reg/2021/57/oj>).

³ Regulation (EC) No 1272/2008 of the European Parliament and of the Council of 16 December 2008 on classification, labelling and packaging of substances and mixtures, amending and repealing Directives 67/548/EEC and 1999/45/EC, and amending Regulation (EC) No 1907/2006. OJ L 353 31.12.2008, p. 1. ELI: <http://data.europa.eu/eli/reg/2008/1272/oj>.

⁴ The Committee for Risk Assessment (RAC) and the Committee for Socio-economic Analysis (SEAC), *Background document to the Opinion on the Annex XV dossier proposing restrictions on Lead in shot*, p. 3. <https://echa.europa.eu/documents/10162/28acf817-61a6-3ca6-4e85-a71ef0e07740>.

- (3) The Union and its Member States are Contracting Parties to the Convention on the Conservation of Migratory Species of Wild Animals ⁵ (CMS). The Preventing Poisoning Working Group (PPWG) developed Guidelines to Prevent the Risk of Poisoning to Migratory Birds ('Guidelines'), which were adopted in 2014 by CMS Resolution 11.15. The Guidelines recommend both the phasing-out of the use of lead in ammunition across all habitats and the phasing-out of the use of lead in fishing weights in areas where migratory birds have been shown to be particularly at risk of lead poisoning.
- (4) On 16 July 2019, the Commission asked ⁶ the European Chemicals Agency (the Agency), pursuant to Article 69(1) of Regulation (EC) No 1907/2006, to prepare a dossier ('the Annex XV dossier') to address the concerns regarding human health and the environment posed by lead in (i) ammunition, including gunshot used in terrains other than wetlands and bullets used both in wetlands and in terrains other than wetlands and (ii) fishing tackle. The mandate did not extend to uses of ammunition for indoor shooting, or to uses by the police, the military and other security forces.
- (5) On 24 March 2021, the Agency published its Annex XV dossier ⁷ in which it concluded that lead in ammunition and fishing tackle poses a risk to the environment and human health, in particular to vulnerable populations such as children, that is not adequately controlled and needs to be addressed on a Union-wide basis. With regard to the risk to the environment, the ingestion by birds and other animals of unrecovered lead-based ammunition ('lead ammunition'), lead-based sinkers ('lead sinkers') and lead-based lures ('lead lures') from hunting, sports shooting and fishing activities results in the poisoning and frequent death of animals. Furthermore, lead accumulation at sports-shooting ranges can result in the leaching of lead-polluted surface water into local watercourses and may affect groundwater, potentially poisoning people, livestock and wildlife. The Agency also concluded that there are human health risks associated with consuming the meat of animals killed with lead ammunition, particularly for children aged seven years and younger, or when making lead ammunition or sinkers or lures at home.
- (6) The Agency estimated that, if the current releases of lead from shooting and fishing in the Union continue, approximately 876 000 tonnes of lead will be released into the environment over the next 20 years. This will place at least: (i) 135 million birds at risk of poisoning from the ingestion of lead-based gunshot ('lead gunshot'); (ii) 14 million birds at risk of poisoning from the ingestion of lead via the consumption of food; and (iii) 7 million birds at risk of poisoning from ingestion of sinkers and lures. In addition, the Agency estimated that, each year, about 13.8 million individuals from hunters' families, including 1.1 million children aged seven years or younger, are vulnerable to lead exposure from game meat.
- (7) Against this background, the Agency proposed a restriction of lead in ammunition and certain fishing tackle which included, inter alia, a restriction on the placing on the market and use of lead in a concentration of equal to or greater than 1% in gunshot, and a restriction on the use of lead in a concentration of equal to or greater than 1% in projectiles other than gunshot (such as bullets and airgun pellets). Moreover, the Agency proposed imposing information obligations on retailers of those products and labelling obligations on ammunition suppliers. The proposed restriction is intended to reduce lead

⁷ European Chemicals Agency, *Annex XV Restriction Report – Lead in outdoor shooting and fishing*, 24 March 2021, <https://echa.europa.eu/documents/10162/da9bf395-e6c3-b48e-396f-afc8dcef0b21>.

emissions by approximately 630 000 tonnes over the 20 years following its introduction. This would be a reduction of 72% compared with a situation without the proposed restriction. The restriction would also prevent IQ loss in about 7 000 children in the Union per year, leading to a welfare saving of roughly EUR 70 million per year.

- (8) In its Annex XV dossier, the Agency concluded that alternative ammunition for hunting (such as steel and bismuth gunshot, and copper and brass bullets): (i) are widely used; (ii) are technically feasible; (iii) are comparable in price with lead ammunition; and (iv) have better human health and environmental hazard and risk profiles than lead ammunition. On sports shooting with gunshot, the Agency found that it would be feasible to substitute steel for lead while maintaining a comparable performance, but that such a shift would require the approval of the relevant international sports-shooting federations. By contrast, alternatives for lead-based bullets ('lead bullets') and lead-based airgun pellets ('lead pellets') in sports shooting were not found to perform as well as lead. The Agency noted that lead is currently difficult to replace in certain applications, such as small-calibre centrefire ammunition, rimfire ammunition, airgun ammunition, ammunition for muzzle-loading rifles, full metal jacket bullets and open tip match bullets.
- (9) The Agency recommended to defer the entry into application of the restrictions on other articles within the scope of the Annex XV dossier and the information and labelling obligations. This would allow operators to adapt to the new rules and put in place the necessary risk management measures. The Agency proposed a five-year transitional period for the ban on placing on the market and use of gunshot for hunting. It proposed a deferred application period for the ban on the use for hunting of large-calibre and small-calibre projectiles other than gunshot of 18 months and five years respectively.
- (10) The Agency suggested a derogation from the ban on the use of lead bullets for sports shooting, on condition that specific risk management measures are implemented at sports shooting ranges and no agricultural activity takes place there. The Agency also did not support optional derogations from the ban on the placing on the market and the use of lead gunshot in sports shooting. The Agency supported a ban on the use of lead gunshot for sports shooting, but also included the derogations as optional and assessed their costs and benefits in the event that the Commission did not consider such a ban appropriate and required an assessment of the impact of allowing the continued use of lead gunshot for sports shooting under conditions that would minimise the identified risks to human health and the environment. The conditions for the optional derogation included: (i) the licensing of sports shooters by Member States; (ii) the authorising of sports-shooting ranges by Member States; (iii) frequent recovery of more than 90% of the lead gunshot discharged in the shooting range; (iv) the presence of strict measures for the protection of water from lead contamination, and remediation from such contamination; (v) a ban on any agricultural activity in the shooting range; (vi) records of compliance with conditions (iii) to (v); (vii) the labelling of cartridge packaging and of individual cartridges with warning statements; and (viii) a requirement on Member States to report to the Commission the number of licensed users, authorised shooting ranges and quantity of lead gunshot used on their territory.
- (11) The Agency indicated that the restriction should not apply to indoor shooting, uses by police and the military, and uses for security purposes, as indicated in the Commission request to the Agency of 16 July 2019, as well as uses related to testing, development, research and investigation.

- (12) Following the public consultation on the Annex XV dossier, the Agency revised⁸ its initial proposal to take into account the comments received during the consultation. In particular, it proposed an increase in the permissible concentration limit for lead in projectiles other than gunshot containing copper or copper alloys from less than 1% to less than 3% by weight. This was proposed to allow the continued use of alternative ammunition made of brass (a copper alloy), which currently contains up to 3% lead. The revised Annex XV dossier also included additional derogations for seal hunting with bullets and for hunting with full metal jacket bullets, under certain conditions.
- (13) Only a limited number of Member States currently have national provisions in place that prohibit the use of lead in hunting and outdoor shooting to reduce lead emissions and exposure. The Annex XV dossier demonstrated that Union-wide action to address the risk associated with lead in ammunition is necessary to ensure a harmonised level of protection across the Union.
- (14) On 2 June 2022, the Agency's Committee for Risk Assessment (RAC) adopted an opinion pursuant to Article 70 of Regulation (EC) No 1907/2006 with respect to the Annex XV dossier. In its opinion, RAC concurred with the Agency's conclusion that the use of lead in hunting and outdoor shooting poses a wide range of risks to both human health and the environment. RAC concluded that the restriction proposed by the Agency would be the most appropriate Union-wide measure to address the identified risks.
- (15) RAC strongly supported a shorter transitional period than the five years proposed by the Agency for the restriction on the use of gunshot in hunting because the use of lead gunshot in wetlands is already regulated in the Union as a whole and because the shorter the transition period is, the less lead that is released into the environment.
- (16) RAC did not support the optional derogations for the placing on the market of lead gunshot and for the use of lead gunshot for sports shooting. It considered that the enforcement of the proposed restriction, as well as the restriction on lead in gunshot in or around wetlands introduced by Commission Regulation (EU) 2021/57, would increase in complexity if those optional derogations were introduced. However, should those derogations be granted, RAC indicated that it would support the suggestion by the Agency's Committee for Socio-Economic Analysis (SEAC) that their scope should be limited to shot sizes between 1.9 and 2.6 mm.
- (17) RAC supported the labelling and information requirements proposed by the Agency for lead ammunition. However, RAC recommended avoiding confusion by increasing the lead concentration limit that would trigger the requirements from 0.3% to 1% by weight, so as to align it with the concentration limit that triggers the ban on placing on the market and use.
- (18) On 1 December 2022, RAC adopted a supplementary opinion, at the request of the Agency's Executive Director and in accordance with Article 77(3), point (c), of Regulation (EC) No 1907/2006⁹. This opinion reassessed RAC's evaluation of a

⁸ The Committee for Risk Assessment (RAC) and the Committee for Socio-economic Analysis (SEAC), *Background Document to the Opinion on the Annex XV dossier proposing restrictions on lead in outdoor shooting and fishing*, p. 20, <https://echa.europa.eu/documents/10162/14c4fceb-31b4-aea2-a9b5-75cdcef8013f>.

⁹ The Committee for Risk Assessment (RAC), *Request by the Executive Director of ECHA under Article 77(3)(c) of REACH to prepare a supplementary opinion on the restriction dossier on lead in outdoor shooting and fishing*, 1 December 2022, <https://echa.europa.eu/documents/10162/e0a5c108-a7cd-dbd3-67ce-d00a6470d8ce>.

specific dataset concerning the presence of lead in game meat and the human intake of game meat provided by the European Food Safety Authority. RAC reiterated its conclusion that there is a moderate to high risk from exposure to lead in game meat for children in hunter families but that risks for adults are likely to be low.

- (19) On 2 December 2022, SEAC adopted an opinion pursuant to Article 71(1) of Regulation (EC) No 1907/2006. It concluded that the proposed restriction would be the most appropriate Union-wide measure to address the identified risks as concluded by RAC, provided that the conditions are modified as proposed by SEAC. The conclusion takes into account the proportionality of the socio-economic benefits of the measure to its socio-economic costs.
- (20) SEAC supported RAC's view that, for the restriction on the use of lead gunshot in hunting, a transition period significantly shorter than the five years proposed by the Agency would be justified because there is insufficient evidence that increasing the production volumes of alternative ammunition to replace lead gunshot in hunting would require five years. The available information supported the argument that the volumes of lead gunshot used for hunting could be replaced sooner. Substantive and credible evidence to reach a conclusion on the specific length of the transition period was not available to SEAC, so it considered that the minimum period required to ensure the smooth transition to alternatives would be 18 months.
- (21) In order to make it easier to enforce the ban on the use of lead gunshot and bullets in hunting, SEAC recommended a ban on the carrying of lead ammunition while hunting or as part of going hunting.
- (22) In order to maximise the effectiveness of the proposed restriction, SEAC suggested limiting the optional derogations for lead gunshot for sports shooting to shot sizes between 1.9 and 2.6 mm because those are the shot sizes used for that activity.
- (23) . Regarding the ban on the use of lead ammunition in muzzle loaders or other historic firearms, SEAC noted that non-lead alternatives are not yet available for use in historic firearms. It nevertheless considered that a conclusion on whether a derogation for that use would be justified on the basis of cultural values, as had been suggested during the public consultation, would not be possible due to a lack of information on the socio-economic impacts of such a derogation.
- (24) SEAC did not have sufficient information to reach a conclusion as to whether the cost of providing information at the point of sale as proposed by the Agency and supported by RAC would be fully justified, or whether other educational measures could more effectively influence purchasing behaviour. SEAC agreed with RAC that the same concentration limit of 1% by weight proposed for restricting the placing on the market and use of lead ammunition should also apply to labelling and information requirements in order to avoid confusion and assist enforcement. SEAC considered that enforcement in the field would be more effective if individual lead gunshot cartridges were identified by means of markings or colour coding. However, it did not have sufficient information to conclude on the technical feasibility, the costs involved and the practicality of such markings or colour coding.
- (25) The Forum for Exchange of Information on Enforcement ('Forum') was consulted in accordance with Article 77(4), point (h), of Regulation (EC) No 1907/2006. Its recommendations were taken into account.

- (26) On 27 February 2023, the Agency submitted the opinion of RAC and SEAC¹⁰ to the Commission.
- (27) Taking into account the Annex XV dossier, the opinion of RAC and SEAC, the socio-economic impact and the availability of alternatives, the Commission considers that there is an unacceptable risk to the environment and human health stemming from the use of lead ammunition, in particular gunshot, and lead fishing tackle. That risk needs to be addressed on a Union-wide basis. It is therefore appropriate to introduce a restriction on the placing on the market and use of such ammunition and fishing tackle. However, to reduce complexity and increase legal clarity, the Commission considers that the restriction on lead ammunition and lead fishing tackle as proposed in the Annex XV dossier, covered by the opinions of RAC and SEAC and assessed in the Forum advice should be adopted by the Commission by means of two separate regulations.
- (28) The restriction of lead in ammunition should apply to ammunition with a lead concentration equal to or greater than 1% by weight. That is the concentration limit laid down in the restriction in entry 63 of Annex XVII to Regulation (EC) No 1907/2006 for lead in gunshot in or around wetlands, in order to prevent a significant toxicity danger to migratory birds and other wildlife and to their habitats. Moreover, it is considered that the 1% concentration limit is sufficient to address the identified risk and can be readily achieved by producers of alternatives, given that some of those alternatives are likely to contain lead as an impurity.
- (29) The Commission took note of the RAC and SEAC opinion that the transitional period for the restriction on the use of lead gunshot in hunting should be shorter than the five years proposed by the Agency, but not shorter than 18 months. The Commission agrees with SEAC and RAC that sufficient production volumes of alternative ammunition to replace lead gunshot in hunting can be achieved sooner than five years. However, it has doubts as to whether a transitional period of 18 months would be sufficient for manufacturers to scale up their production of alternative ammunition. It therefore considers a three-year transitional period to be appropriate. The Commission also considers that the definition of gunshot should include both pellets and slugs for the purpose of this restriction because both can be discharged from a shotgun.
- (30) The Commission concurs with SEAC that a ban on carrying lead gunshot while hunting or as part of going hunting is necessary in order to facilitate enforcement of the restriction on ammunition containing a concentration of lead equal to or greater than 1% by weight.
- (31) The Commission acknowledges the SEAC conclusions that a restriction of lead bullets for hunting and sports shooting is proportionate and that alternatives to lead are available for hunting, in particular for centrefire bullets with calibres equal or larger than 5.6 mm. However, the Commission notes that bullets, including lead bullets, are the main ammunition used for defence purposes, and that the SEAC analysis of the possible impact of restricting lead bullets on the Union's defence capabilities was carried out in a radically different geopolitical context. Since the SEAC opinion was finalised in December 2022, international developments highlighted the need for the Union to strengthen its defence readiness and defence capacity in response to growing threats. In 2025, the Commission presented a strategy to achieve defence readiness by 2030,

¹⁰ The Committee for Risk Assessment (RAC) and the Committee for Socio-economic Analysis (SEAC), *Opinion on an Annex XV dossier proposing restrictions on lead and its compounds*, 2 December 2022, <https://echa.europa.eu/documents/10162/2c82ef18-ce5d-4b4f-8ff0-002932154acc>.

through a White Paper for European Defence¹¹ and the ReArm Europe Plan, with the aim to quickly and significantly increase the Union's defence investments and defence capabilities. The strategy included, among other things, actions supporting the strategic stockpiling of bullets, including lead bullets, and ensuring sufficient industrial capacity for the timely replenishment of ammunition in case of need. Against this background, and following discussions with the Member States during the decision-making process, the Commission considers it appropriate and necessary to exclude bullets from the scope of the restriction to prevent any potential impact, however small, on the production of lead bullets. Limiting the scope of the restriction to lead gunshot will still ensure a high level of protection of human health and the environment from exposure to lead. Based on the Agency's estimates, the expected lead emission reduction from prohibiting the use of lead bullets for hunting and outdoor sports shooting is 8 232 tonnes over 20 years. This is much less than the expected lead emission reduction from prohibiting the placing on the market and use of lead gunshot, i.e. 558 000 tonnes over 20 years. Excluding bullets from the scope will therefore only have a minimal effect on the overall effectiveness of the restriction.

- (32) The Commission does not consider it justified that airgun pellets used for hunting or sports shooting be subject to this restriction. Alternatives to lead airgun pellets are available only in low quantities, lack precision and cost up to four times more than lead airgun pellets. In addition, both the Agency and RAC agreed that a restriction on lead pellets used in airguns would only marginally reduce lead emissions. It would also not decrease risks to people because lead airgun pellets are mostly used to kill pests that are not eaten, so there is no Union-wide risk to humans from ingesting lead fragments from airgun pellets.
- (33) The Commission agrees that a ban on the placing on the market and use of lead gunshot for sports shooting as proposed by the Agency and supported by RAC and SEAC would make enforcement easier. However, the Commission notes that such a ban could affect Member States' possibility to host the Olympic Games and other international competitions in which the use of lead is mandatory. It would also prevent athletes from training with lead gunshot in Member States. The Commission considers that a switch to alternative ammunition (such as steel shot) in sports shooting could be feasible in the long-term but the timing of substitution is highly uncertain, and therefore a derogation without time limit is justified. As recommended by SEAC, the derogation should be limited to gunshot sizes between 1.9 mm and 2.6 mm, which are the only calibres used in competitions. The derogation should also depend on the presence, in the shooting range where the sports shooting takes place, of appropriate risk management measures, both to ensure lead containment and to limit the release of lead. The Commission does not consider it appropriate to include among the mandatory risk management measures the obligation to recover more than 90% of spent lead gunshot, as the small dimensions of the gunshot and the wide area across which the gunshot is discharged makes such a high recovery rate very difficult to achieve. In addition, the Commission does not consider appropriate the mandatory licensing of users of sports shooting ranges by Member States, which it considers to be too bureaucratic and labour intensive. The Commission nevertheless considers it appropriate to include, as recommended by the Agency the obligation to contain, monitor and, where necessary, treat drainage water

¹¹ European Commission. White Paper for European Defence – Readiness 2030. https://commission.europa.eu/document/download/e6d5db69-e0ab-4bec-9dc0-3867b4373019_en?filename=White%20paper%20for%20European%20defence%20-%20Readiness%202030.pdf

(including surface water run-off) from gunshot impact areas and the prohibition of any agricultural use within a shooting range's boundary. The Commission also considers it appropriate to include additional risk management measures intended to ensure a level of protection comparable to that of the measures proposed by the Agency, namely the implementation of: (i) at least two specific lead-containment measures (walls, berms or banks, nets or shot curtains, and surface covering); (ii) pH monitoring and, where necessary, treatment of gunshot-impact areas; and (iii) limiting the use of lead gunshot to members of a sports shooting federation. Outdoor sports shooting ranges should also recover spent lead gunshot at least once every three years and should report information concerning lead spent and recovered on their premises to the responsible Member State authorities, so that the effectiveness of the risk management measures to minimise lead emissions from sports shooting with lead gunshot can be monitored. The Commission also considers that a review of that derogation after 10 years is needed in order to evaluate the progress made towards achieving a Union-wide switch to alternatives in sports shooting.

- (34) The Commission considers it appropriate to allow derogations from the restriction on lead gunshot fired from historic firearms such as muzzle loaders and their modern replicas, because there is no suitable alternative ammunition that would not risk irreparably damaging them. In addition, RAC recognised that their use is limited in volume and that the impact of the derogation on overall risk reduction would therefore be low.
- (35) The Commission concurs with RAC and the Agency that a requirement for retailers to display information at physical and online points of sale, as well as on packaging, is justified in order to warn users of the risks of using lead gunshot. However, the statement to be placed on the packaging should be shorter than the one recommended by the Agency, in order to allow it to be placed on small packaging and to reduce the need to place it on fold-out labels, a leaflet or a tie-on tag.
- (36) Member States should report the information received from outdoor sports-shooting ranges to the Agency every five years, so that the information on the effectiveness of the risk-management measures is available to the Commission and the other Member States. In order to facilitate the smooth and timely implementation of the restriction, and allow members of sports shooting federations to easily identify sports shooting ranges where they can train with lead gunshot, Member States should also rapidly make available a list of outdoor sports shooting ranges located on their territory which have implemented appropriate risk management measures to ensure lead containment and limit lead releases to the environment.
- (37) This restriction should not apply to uses of lead gunshot which were not included in the Commission mandate to ECHA of 16 July 2019 and therefore not covered by the scope of the Agency's Annex XV dossier, namely the following uses: (i) indoor shooting; (ii) uses by the police and law enforcement, and other security applications; (iii) military and defence applications; (iv) the protection of critical infrastructures, commercial shipping or high-value convoys; (v) the protection of public buildings and public space; (vi) self-defence; (vii) technical testing and proofing of guns and ammunition; (viii) historical and technical research or investigation; and (ix) testing and development of materials and products for ballistic protection and forensic analysis. For the same reason, the restriction should not apply to the use of lead in primers and wads.
- (38) Some Member States have national provisions in place for the protection of the environment or human health that prohibit or restrict the use of lead in gunshot, and that

are stricter than those laid down in this Regulation. Requiring those Member States to reduce their existing level of protection from exposure to lead in order to comply with this Regulation might lead to a greater use of lead in those Member States. Such a result would not be compatible with the high level of protection required by Article 114(3) of the Treaty. Member States should therefore be allowed to maintain stricter provisions restricting only the use of gunshot.

- (39) In light of the broader provisions on lead in gunshot introduced by this Regulation and in order to give manufacturers and users sufficient time to transition to alternative forms of ammunition, paragraphs 11 to 14 of entry 63 of Annex XVII to Regulation (EC) No 1907/2006 should apply until [*Publications Office: insert date of **three years** after entry into force of this Regulation*].
- (40) Regulation (EC) No 1907/2006 should therefore be amended accordingly.
- (41) The measures provided for in this Regulation are in accordance with the opinion of the Committee set up under Article 133 of Regulation (EC) No 1907/2006,

HAS ADOPTED THIS REGULATION:

Article 1

Annex XVII to Regulation (EC) No 1907/2006 is amended in accordance with the Annex to this Regulation.

Article 2

This Regulation shall enter into force on the twentieth day following that of its publication in the *Official Journal of the European Union*.

This Regulation shall be binding in its entirety and directly applicable in all Member States.

Done at Brussels,

For the Commission
The President
Ursula VON DER LEYEN
